WHAT WAS DONE BEFORE WE JOINED

aarisehealthcare.com

- ✓ 91 blogs published targeting research compounds
- ✓ 100+ product pages live (steroids, peptides, hormones)
- ✓ Country pages created — Mexico, Peru, Paraguay, US
- ✓ GA4 + GSC installed and tracking
- ✓ 59 pages indexed by Google
- ✗ Zero meta descriptions on any page
- ✗ All 91 blogs in "Uncategorized"
- ✗ 32 blog titles have "Research Research" typo
- ✗ WordPress categories still set to fashion/lifestyle defaults

aarisepharma.com

- ✓ 100 blogs published — city + country targeting
- ✓ Country pages for Mexico, Peru, Paraguay, US
- ✓ India city pages — Haridwar, Mumbai, Delhi etc.
- ✓ GA4 + GSC connected — 7,562 active users
- ✓ 637 keywords ranking — strong base
- ✓ Product snippets showing in search (371 clicks)
- ✗ No meta descriptions — 108K impressions wasted
- ✗ US market: 14,458 impressions, 0.28% CTR
- ⚠ Off-topic blogs diluting pharma API authority

COUNTRY	PHARMA IMPRESSIONS	PHARMA CLICKS	PHARMA CTR	HEALTH IMPRESSIONS	HEALTH CLICKS	STATUS
us United States	14,458	40	0.28%	854	4	Critical
mx Mexico	666	10	1.50%	12	1	Needs Work
pe Peru	117	7	5.98%	0	0	Early Stage
py Paraguay	28	3	10.71%	0	0	Building

Key insight: The US market on Pharma has 14,458 impressions but only 40 clicks — a 0.28% CTR. Industry standard for this type of page is 2–3%. This single fix could bring 200–400 additional US clicks per month.

WHAT 2026 SEO RESEARCH SAYS — APPLIED TO AARISE

- **Information Gain is now a ranking factor** — Google measures how much new useful info your content adds. Template-style country blogs score near zero and get suppressed. Real content with specs, MOQ, COA info wins.
- **51% of B2B buyers now start on ChatGPT/Perplexity** — Content needs FAQ sections and structured data so AI tools cite it. Pharma already appears in Google AI Overviews — we need to reinforce this.
- **Entity SEO over keywords** — Google needs to understand the site is "about" pharma APIs and research compounds. Healthcare currently signals a lifestyle/fashion site due to wrong categories.
- **Meta descriptions directly control CTR** — Pages with no meta description show auto-generated snippets that don't convert. This explains the 0.28% US CTR on Pharma despite strong rankings.
- **E-E-A-T matters for pharma content** — No author bios = no trust signal. For medical/pharma content Google actively checks expertise signals. Missing on both sites.
- Product + capability pages beat blogs for B2B pharma** — The Pharma city pages (API Supplier in Haridwar etc.) are the right strategy. They need meta descriptions and FAQ schema to convert impressions.

IDENTIFIED GAPS — PRIORITISED BY IMPACT

#	GAP	SITE	IMPACT	EFFORT
1	No meta descriptions on any page — Google shows random snippets, nobody clicks	Both	Critical	Low
2	"Research Research" typo in 32 blog titles — looks spammy, Google suppresses	Healthcare	High	Low
3	All 91 blogs in "Uncategorized" — Google can't understand site is about research compounds	Healthcare	High	Low
4	108,468 impressions on Dispersible Tablets at 0.41% CTR — biggest missed opportunity	Pharma	Critical	Low
5	Country pages are thin templates — low Information Gain score, getting suppressed	Both	Medium	Medium
6	No author bios on any blog — E-E-A-T signal missing for pharma content	Both	Medium	Low
7	Off-topic blogs (Clear Tone Cream, Paracetamol) — dilute pharma API authority	Pharma	Medium	Low

- 1

Fix meta descriptions — Dispersible Tablets + all US pages on Pharma

Why: The Dispersible Tablets page has 108,468 impressions and 0.41% CTR. The US market has 14,458 impressions and 0.28% CTR. A good meta description tells the searcher exactly what they'll find and why to click. This is the highest ROI task on both sites.

Expected impact: CTR increase from 0.41% → 2%+ on Dispersible Tablets = 1,500+ extra clicks/month. US CTR 0.28% → 1.5%+ = 150+ extra US clicks.

Priority 1

Via API
- 2

Fix 32 "Research Research" title typos on Healthcare

Why: Google's spam detection flags repeated words in titles as low-quality content. These 32 posts are likely being suppressed or ranked lower because of this. Fixing them signals content quality improvement.

Expected impact: These pages begin ranking properly. Impressions start growing for country-targeted content within 2-4 weeks.

Priority 1

Via API
- 3

Fix Healthcare site categories — create Peptides, Steroids, Hormones, Research Compounds

Why: Currently all 91 blogs are "Uncategorized" and the site has default WordPress tags like "Fashion" and "Trending Outfit." Google uses site taxonomy to understand what a site is about. Right now it can't tell Healthcare is a pharma site.

Expected impact: Site-wide authority improvement. Google starts associating the domain with research compound keywords. Rankings across all pages improve gradually.

Priority 2

Via API
- 4

Add meta descriptions to all 48 country-targeted pages — both sites

Why: Mexico, Peru, Paraguay, US pages exist on both sites but have near-zero CTR despite having impressions. Each page needs a targeted meta description that speaks to the buyer in that country — "Bulk steroid API supplier shipping to Mexico..."

Expected impact: Direct CTR increase across all 4 target markets. Most measurable result of Week 1.

Priority 2

Via API

EXPECTED IMPACT — END OF WEEK 1

Dispersible Tablets CTR	0.41% → 1.5-2%
US market clicks (Pharma)	40 → 150+/month
Healthcare indexing	59 → 100+ pages
"Research Research" titles fixed	32 pages
Meta descriptions added	50+ pages
Country pages optimised	48 pages

BLOGS CURRENTLY WORKING VS NOT

✓ WORKING — Pharma

Dispersible Tablets (440 clicks)
API Supplier from India (33 clicks)
Medicated Toothpaste (15 clicks)
COA & MSDS Guide (10 clicks)

✗ NOT WORKING — Healthcare

All country blogs — 0 impressions
Semaglutide guide — 120 impressions, 0 clicks
Research Compounds — 59 impressions, 0 clicks

⚠ IMPRESSIONS BUT NO CLICKS

US pages — 14,458 impressions, 40 clicks
Dispersible Tablets — 108K impr, 0.41% CTR
Fix = meta descriptions
